IDEATION PHASE

Brainstorm & Idea Prioritization Template

Date	01 October 2026	**Maximum Marks**	4 Marks
Project Name	**Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer**		
Team ID	SWTID-2026-6686		
Team Details	**Team Leader:** MANISHA R **Team Members:** GOPIKA K, VINDHIYA G, NITHIYASRI M		

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Defined Problem Statement: The current IT procurement process for standard laptops relies on manual emails and disjointed approvals, leading to delayed employee onboarding, lost requests, and a lack of status visibility. There is a critical need to automate the request, approval, and fulfillment workflows using ServiceNow Flow Designer to reduce turnaround time, ensure compliance, and eliminate manual processing errors.

Step-2: Brainstorm, Idea Listing and Grouping

Theme 1: Self-Service & User Experience

- **Idea 1:** Build a standardized, user-friendly Service Catalog item specifically for "Standard Laptop Requests."
- **Idea 2:** Trigger automated email or platform notifications to keep the user updated at each stage (Requested, Manager Approved, IT Processing, Ready for Pickup).

Theme 2: Workflow & Approval Automation

- **Idea 3:** Utilize Flow Designer to automatically look up the requester's direct manager and route the approval without manual IT intervention.
- **Idea 4:** Implement conditional logic in the flow to auto-approve requests if it is a standard replacement for a device older than 4 years.

Theme 3: Inventory & IT Fulfillment

- **Idea 5:** Add a step in Flow Designer to check the current local inventory in the Asset module before generating a procurement task.
- **Idea 6:** Automatically generate catalog tasks (SCTASKs) for the IT hardware team only after all prior manager and financial approvals are successfully logged.

Step-3: Idea Prioritization (Impact vs. Feasibility Matrix)

High Impact	Low Impact
High Feasibility (Do Now) • **Idea 1:** Standardized Service Catalog item. • **Idea 3:** Flow Designer automated manager approval routing. • **Idea 6:** Automated IT catalog task generation post-approval.	**High Feasibility (Quick Wins)** • **Idea 2:** Automated status notifications.
Low Feasibility (Plan for Phase 2) • **Idea 5:** Live inventory checks via Asset Management integration (requires updated CMDB/Asset database).	**Low Feasibility (Discard / Revisit)** • **Idea 4:** Age-based auto-approvals (requires complex edge-case handling and policy alignment).
