IDEATION PHASE

DEFINE THE PROBLEM STATEMENTS

Date	29 September 2026
Team ID	SWTID-2026-6686
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

CUSTOMER PROBLEM STATEMENT TEMPLATE:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	An IT Procurement Manager / Employee requesting standard hardware
I'm trying to	Procure and approve standard laptop orders quickly without manual bottlenecks
but	Requests get delayed in manual routing, approvals take too long, and tracking inventory is cumbersome
because	Traditional procurement lacks automated triggers, notifications, and dynamic task assignment through Flow Designer
which makes me feel	Frustrated, stressed about delivery timelines, and overwhelmed by manual administrative work

PROBLEM STATEMENTS TABLE

Problem Statement (PS)	Customer	I'm trying to	But	Because	Which makes me feel
PS-1	IT Procurement Manager / Approver	Automatically route and approve standard laptop requests based on department and budget thresholds	Requests often sit pending in personal queues or bypass automated validation rules	Current workflows do not dynamically evaluate catalog variables or trigger automated task creation in real-time	Concerned about delayed onboarding, operational bottlenecks, and extra manual effort

PS-2	End User / Requester	Track the real-time status of my standard laptop order from submission to delivery	I have zero visibility into where the approval is stuck or when fulfillment will happen	Procurement tracking updates rely on manual emails rather than automated Flow Designer notifications	Confused, anxious, and restricted regarding hardware availability

Final Problem Statement Summary

The project addresses the need for automated IT procurement and streamlined standard laptop provisioning. The system should use **ServiceNow Flow Designer** to capture catalog requests, evaluate business rules or thresholds, trigger automated approval tasks, and update request stages dynamically. This reduces procurement cycle times, eliminates manual tracking errors, and makes the hardware ordering process consistent, scalable, and user-friendly.
